

SUT International Subsea Technical Conference

'Technology for the Coming Decade'

CALL FOR SPEAKERS

*Tuesday 17th and Wednesday 18th April 2012
HQS Wellington, Temple Pier, London*

Whether we are concerned with enhancing production in mature developments or working at the frontiers of ultra-deep water, innovation through the development of relevant new technologies is key to the success of our industry. Innovation will enable the safe exploitation of hitherto unrecoverable and non-viable assets

This event follows on from previous successful events run by the Society's Branches in Perth, WA and Rio de Janeiro offering a high quality event at a very competitive cost.

SUT's International Subsea Technical Conference is *the* forum to transfer knowledge, understand technology and share best practice.

Experts from operators, contractors, manufacturers, consultants and regulators who are interested in speaking at this event are invited to submit an expression of interest outlining the proposed content. The conference will focus on:

- Technologies for SURF integrity management
- Technologies for reducing the costs of ultra-deep developments
- Technologies for boosting production from subsea fields

It is likely that presentations will fall into one of the categories below:

- Subsea processing, pumps and compressors
- Innovative installation & intervention techniques
- Advanced inspection and monitoring
- Reliability and integrity management for subsea systems
- Use of new materials
- Innovations in riser technology
- Instrumentation, controls and sensors
- All-electric systems
- Emergency response systems
- Life of field management systems

We invite interested speakers to contact:

Ian Ball: ian.ball@intecsea.com or Bob Allwood: bob.allwood@sut.org

!! Speaker interest submission deadline is 25 November 2011
